

PRESENTATION

PROBLEM

NOWADAYS, PEOPLE OFTEN FACE DIFFICULTIES WHEN PLANNING TRIPS DUE TO :

- FINDING INTERESTING DESTINATIONS OR ATTRACTIONS(51.4%)

- ORGANIZING THE ITINERARY(40%)

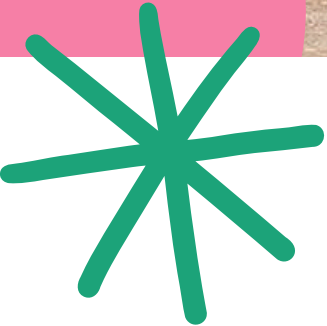

- CALCULATING TRAVEL TIME BETWEEN LOCATIONS(40%)

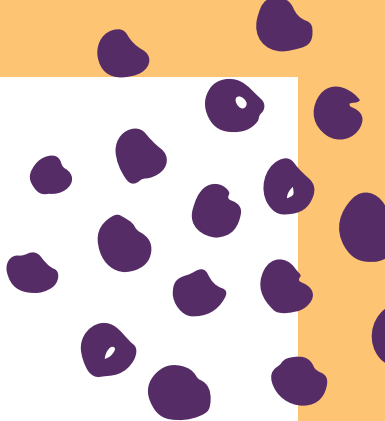

- BOOKING HOTEL OR TRANSPORT(45.7%)

- KEEPING TRACK OF COST(48.6%)

SOLUTIONS

1. Link to Itinerary Converter (Automation)

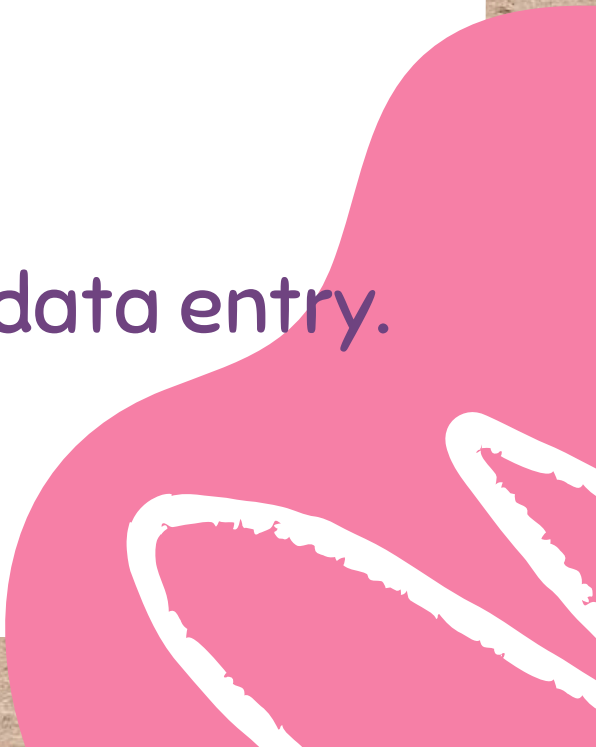

Problem Addressed: Messy and sometimes lack of informative travel data from social media.

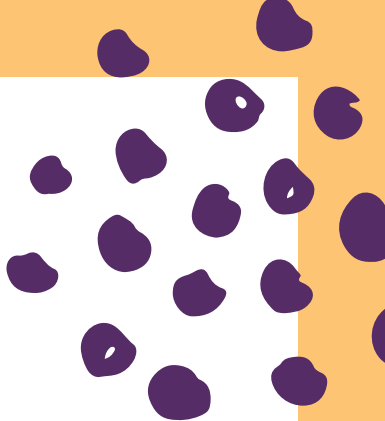

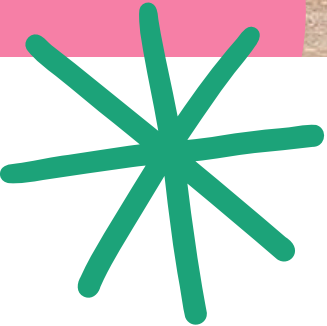

Proposed Solution:

Users can paste the links from any social media regarding anything travel related. The app would automatically then extract the name of the place, address, hours of operation (if available) and photos and ratings from the internet. A structured itinerary is then created from the collected data.

Effect:

Makes it easier for users to plan their trip by reducing the tedious work of manual data entry.

SOLUTIONS

2 . Auto Generated Itinerary (Organization)

Problem Addressed:Disorganised travel arrangements.

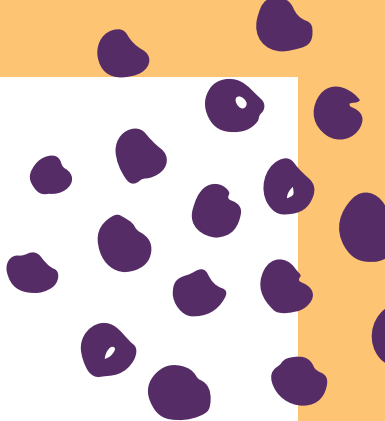

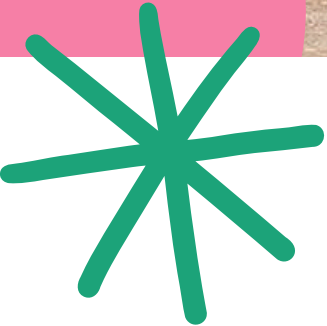

Proposed Solution:

A visual itinerary is automatically generated by the app. It would create a timeline consisting of each day.A map based view of the location is also created.The locations are also categorised according to the day,travel plans or even distance.

Effect:

Increases clarity and makes it easier for users to quickly plan their travel flow.

SOLUTIONS

3. Click and Drag Itinerary Editor (Organization)

Problem Addressed: Obstacles faced by users when rearranging plans.

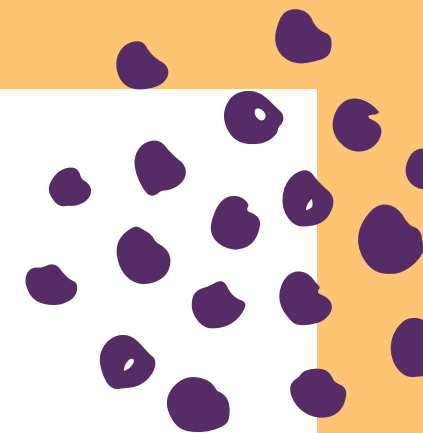

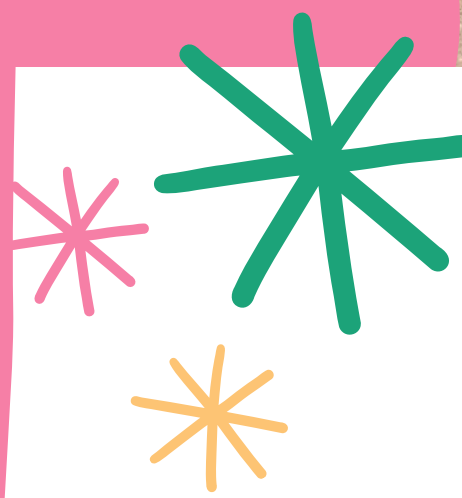

Proposed Solution:

Click and drag allows users to change their plans with ease. A user can simply click, drag and drop to rearrange locations. Locations can be moved between days. After modifications are made, the app would update the travel time and distance.

Effect:

Offers flexibility and makes it easier for users to modify their plans.

SOLUTIONS

4.Smart Route Optimiser (Efficiency)

Problem Addressed:Time wasted as a result of inadequate travel planning.

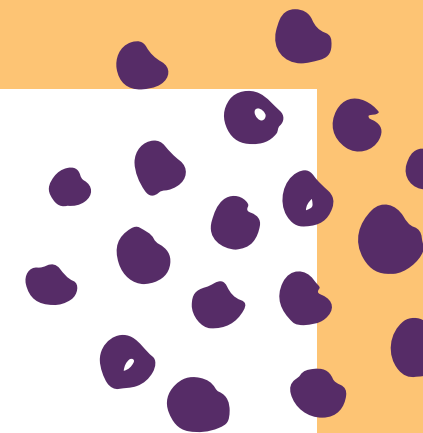

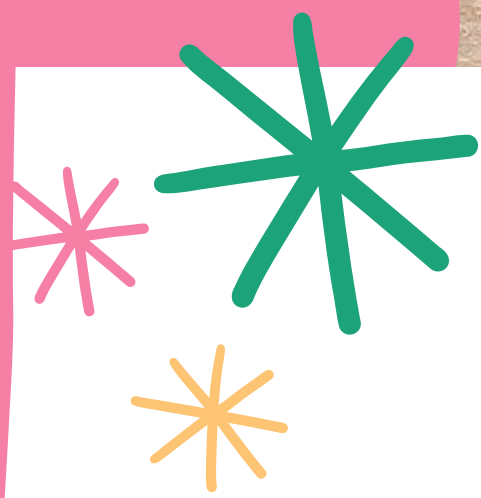

Proposed Solution:

The app determines the shortest and most convenient route between locations. It also recommends the recommended time of visits for certain locations. If there is a delay,the app would automatically suggest an alternate route.

Effect:

Reduces backtracking and increases the amount of time spent at preferred destinations.

SOLUTIONS

5. Travel Time and Distance Estimator (Efficiency)

Problem Addressed: Uncertainty in travel time and distance.

Proposed Solution:

The app would display the travel time and distance once a location is entered. It could support different modes of transportations such as public transportation, own transportation and walking. It would update dynamically according to itinerary changes.

Effect:

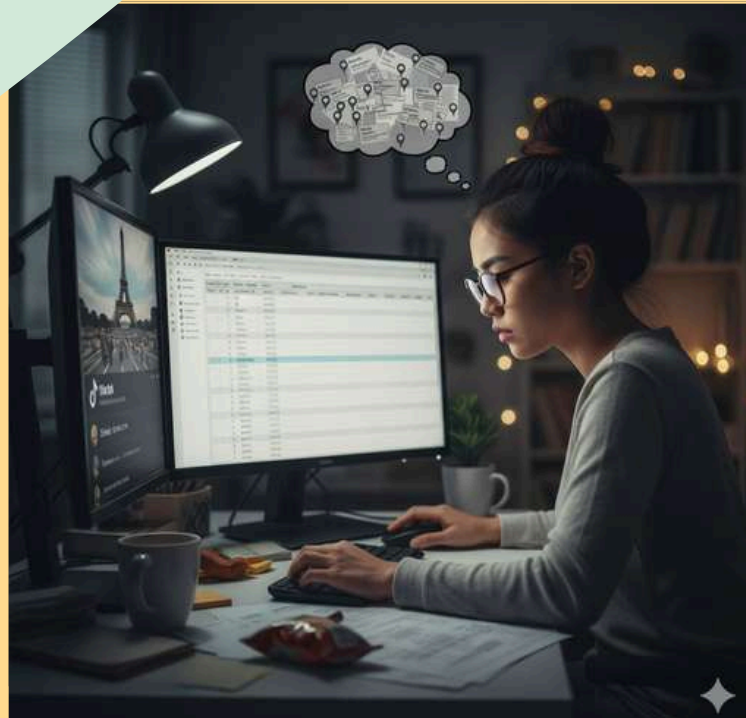

Help users to make wise decisions and save their time.

FRI & SAT: 8:00 AM - 11:00 PM

Shop description

We hand-picked the finest grade of beans and leaves from Southern Colombia all the way to the fields of Sri Lanka. They are harvested from independent farms and private estates too, so we can give back to your local mom-and-pop seed growers who love coffee and tea as much as we do.

Rating

Anna Katrina

The materials used are premium. The material is thick and smooth but doesn't make it hot. Very suitable for work or everyday use.

Shawn Garcia

Is Good! The materials used are premium. The material is thick and smooth but doesn't make it hot. I really like it!

Sacha Dubois

I love it! materials used are premium. The material is thick and smooth but doesn't make it hot. Very suitable for work or everyday use.
